Art Unit: 1712

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Fujimori EP 1065231 Patent in view of Kurosawa '919.

Fujimori produces polycarbonate from PCPDM (formula 1, 2 of page 3), carbonic acid diester (paragraph 20) and transesterification catalyst (paragraph 23). Various catalysts are named including Mg acetate, Ca acetate etc (paragraph 25). Fujimori does not list applicant's specific transesterification catalysts.

Zn acetate, Ph acetate, tin acetate as well as ZnO and PbO (col. 5 line 53-59 of Kurosawa) are known as alternatives to Ca acetate or Mg acetate transesterification catalysts.

It would have been ~~prima~~ facie obvious to use any transesterification catalyst to make Fujimori's polycarbonate.

The examiner recognizes applicant's comparison examples (eg C2) attempts to compare some transesterification catalysts against other transesterification catalysts. However, the comparisons do not keep all variables constant except for species of catalyst. The "heat stirring" is not held constant.
